

Aminoside antibiotics in meat

Streptomycin and Gentamicin are aminoside antibiotics with bactericidal effect, broad spectrum of action, so they are widely used in animal husbandry. Antibiotic residues in meat can affect consumer health if not appropriately controlled through testing for Streptomycin and Gentamicin residue.

To support laboratories to assess the capacity of testing Streptomycin and Gentamicin in meat, NIFC provides a proficiency testing program to determine Streptomycin and Gentamicin content in meat.

Fee: 3,000,000 VNĐ

Time schedule: 09/2022
