

Cl⁻, F⁻, SO₄²⁻, NH₄⁺, Br⁻ in water

Chloride, Fluoride, Sulphate, Ammonium and Bromide need to be measured for water quality assessment.

To control these ions in water, it is necessary to rely on the test results of laboratories that meet the capacity requirements.

To assist laboratories in assessing their capacity to test the levels of Chloride, Fluoride, Sulphate, Ammonium and Bromide in water, NIFC provides a proficiency testing program to determine the content of Chloride, Fluoride, Sulphate, Ammonium and Bromide in water.

Fee: 2,000,000/2 parameters; from the third parameter add:
200,000/parameter

Time schedule: 09/2022

Interested laboratory, click [Register](#) for participating.
