

INTERNATIONAL FOOD CONTROL CONFERENCE 2026

15th - 17th October 2026, Ha Noi - Viet Nam

Biography

Full name, Title: Do Duc Huy

Position: Master's student in Food Science

Affiliation: University of Science and Technology of
Hanoi (USTH)

Do Duc Huy is currently a Master's student in Food Technology at the University of Science and Technology of Hanoi (USTH). His research focuses on food microbiology and food safety, particularly the detection and investigation of microbiological hazards that may affect public health.

In 2026, he was awarded the Odon Vallet Scholarship by the Rencontres du Vietnam Foundation in recognition of his outstanding academic achievements and research potential.

He has experience in food microbiology research, including the isolation and identification of foodborne bacteria, as well as the investigation of toxin-related genes. In particular, he has worked on *Bacillus cereus* isolated from samples associated with food poisoning outbreaks and investigated genes related to its toxin production. In addition, he has studied *B. cereus* growth in fried rice under different storage temperatures. These studies contribute to a better understanding of microbiological risks in starchy foods when improperly stored and support efforts to improve food safety control.

His research interests include microbiological risk assessment, detection of foodborne pathogens, antimicrobial resistance, and the application of microbiological and molecular biology techniques in food safety research. Through these activities, he aims to improve food safety and protect public health in Vietnam.
